EXPERIENCE

Oettinger Davidoff AG, Senior Appian Developer

February 2024 - Present

- Designed and implemented an integration to automate the registration of cigars with the EU, ensuring compliance and saving 0.1 EFT per year.
- Created a library application to streamline aspects of Appian development, significantly reducing development time.
- Developed an Appian plugin to handle file encryption using AES and RSA.
- Installed and managed an on-premise Appian installation for local development and testing.

KPMG Italy, Senior Consultant, Senior Appian Developer

March 2021 - January 2024

- Implemented a healthcare platform that automated the medical expenses reimbursement process, resulting in a 15% improved efficiency in the back-office and reduction of manual errors.
- Developed a risk assessment platform that digitized 80% of the processes of one of the main Italian banks.
- Reduced a process time by 20% by integrating with a Natural Language Understanding technology.
- Improved operational efficiency by 10% by implementing a process mining solution.
- Automated 50% of a developer repetitive task, reducing time effort by 90%, by developing an Appian plugin.

EDUCATION

Design innovation manager and data driven business transformation, Master's degree

December 2020 - December 2022

Università di Torino • 110/110 cum Laude

Thesis: Natural Language Understanding to support Anti-Money Laundering

Computer Engineering, Data Science, Master of Science

September 2018 - October 2020

Politecnico di Torino • 110/110 cum Laude

Thesis: Extraction of spatio-temporal sequences

Computer Engineering, Bachelor of Science

September 2015 - July 2018

Politecnico di Torino • 104/110

- Young Talent's Path, reserved to the 200 best students.

SIDE PROJECTS

Omni Toolkit, Appian plugin

I have been deeply involved in the development of component and suite plugins for Appian and, recently, I have released [Omni Toolkit](#) on the [Appian App Market](#). As part of this work, I have also developed a template project that automates the creation process for these plugins. This template includes a unique component feature that enables local testing of the plugin, eliminating the need for deployment to an Appian Environment.

CrownLabs, Cloud platform

CrownLabs is a cloud platform designed to simplify IT environment management. Originally developed during the COVID-19 pandemic, it remains operational today. Professors can use the platform to deploy lab environments in the cloud, allowing students to access them without requiring specialized equipment. ([GitHub link](#))

SKILLS

Languages Italian mother tongue and fluent in English

Technologies Appian, BPM, SQL, ERD Design, Python, Java, REST API, DevOps, CI/CD, Kubernetes, Docker, Ansible, Android, Firebase, Kotlin

Certifications Appian Certified Senior Developer, Scrum Master Certified, Microsoft Power Platform PL-200 and PL-900
